Inhibitors of Nucleic Acid Synthesis: Biophysical and Biochemical Aspects (Molecular Biology, Biochemistry and Biophysics Molekularbiologie, Biochemie und Biophysik)

H. Kersten, W. Kersten

During the last decade physical and chemical methods have improved rapidly - a fact which allowed the mode of action of antibiotics to be studied - and many biochemically-oriented scientists have devoted their research to the following questions: 1. What is the metabolic pathway that is inhibited selectively, and what are the target molecules within a sensitive cell? 2. What are the relationships between the chemical structure of an antibiotic and the physicochemical properties of the sensitive molecule(s)? 3. Why and how far is the action selective? 4. Is it possible to correlate the interaction with the target molecule(s) with the particular biological activities observed? This monograph deals with those antibiotics which interfere with the biosynthesis of nucleic acids. The idea was to provide an insight into how to investigate the preceding questions experimentally and to solve as yet unresolved problems rather than to give a review of the current state of knowledge. Although the biochemistry of nucleic acid synthesis is known in general, the precise molecular mechanisms by which deoxyribonucleic acid is replicated or transcribed has still to be clarified. For this reason it is not yet possible to describe the molecular mechanisms by which the inhibitors of nucleic acid and protein synthesis exhibit their effects. The fact that the inhibitors of nucleic acid and protein synthesis themselves served as useful tools to obtain an insight into the mechanisms of replication, transcription and translation was one of the most exciting discoveries in this field.

From reader reviews:

Corrina Sutton:

The book *Inhibitors of Nucleic Acid Synthesis: Biophysical and Biochemical Aspects (Molecular Biology, Biochemistry and Biophysics Molekularbiologie, Biochemie und Biophysik)* can give more knowledge and also the precise product information about everything you want. So why must we leave the great thing like a book *Inhibitors of Nucleic Acid Synthesis: Biophysical and Biochemical Aspects (Molecular Biology, Biochemistry and Biophysics Molekularbiologie, Biochemie und Biophysik)*? A few of you have a different opinion about book. But one aim that book can give many details for us. It is absolutely suitable. Right now, try to closer using your book. Knowledge or details that you take for that, you can give for each other; you may share all of these. Book *Inhibitors of Nucleic Acid Synthesis: Biophysical and Biochemical Aspects (Molecular Biology, Biochemistry and Biophysics Molekularbiologie, Biochemie und Biophysik)* has simple shape nevertheless, you know: it has great and big function for you. You can appear the enormous world by open up and read a book. So it is very wonderful.

Charles Lee:

As people who live in the actual modest era should be change about what going on or data even knowledge to make these keep up with the era and that is always change and advance. Some of you maybe may update themselves by looking at books. It is a good choice for yourself but the problems coming to a person is you don't know what one you should start with. This *Inhibitors of Nucleic Acid Synthesis: Biophysical and Biochemical Aspects (Molecular Biology, Biochemistry and Biophysics Molekularbiologie, Biochemie und Biophysik)* is our recommendation so you keep up with the world. Why, since this book serves what you want and need in this era.

Catherine Acevedo:

Typically the book *Inhibitors of Nucleic Acid Synthesis: Biophysical and Biochemical Aspects (Molecular Biology, Biochemistry and Biophysics Molekularbiologie, Biochemie und Biophysik)* has a lot info on it. So when you read this book you can get a lot of help. The book was authored by the very famous author. The writer makes some research ahead of write this book. This book very easy to read you can find the point easily after scanning this book.

Theresa Kuykendall:

In this age globalization it is important to someone to find information. The information will make someone to understand the condition of the world. The condition of the world makes the information simpler to share. You can find a lot of sources to get information example: internet, newspapers, book, and soon. You can see that now, a lot of publisher this print many kinds of book. Often the book that recommended to you is *Inhibitors of Nucleic Acid Synthesis: Biophysical and Biochemical Aspects (Molecular Biology,*

Biochemistry and Biophysics Molekularbiologie, Biochemie und Biophysik) this book consist a lot of the information of the condition of this world now. This kind of book was represented how can the world has grown up. The vocabulary styles that writer use to explain it is easy to understand. The particular writer made some exploration when he makes this book. That is why this book suited all of you.
