Kinetic theory is the link between the non--equilibrium statistical mechanics of many particle systems and macroscopic or phenomenological physics. Therefore much attention is paid in this book both to the derivation of kinetic equations with their limitations and generalizations on the one hand, and to the use of kinetic theory for the description of physical phenomena and the calculation of transport coefficients on the other hand. The book is meant for researchers in the field, graduate students and advanced undergraduate students. At the end of each chapter a section of exercises is added not only for the purpose of providing the reader with the opportunity to test his understanding of the theory and his ability to apply it, but also to complete the chapter with relevant additions and examples that otherwise would have overburdened the main text of the preceding sections. The author is indebted to the physicists who taught him Statistical Mechanics, Kinetic Theory, Plasma Physics and Fluid Mechanics. I gratefully acknowledge the fact that much of the inspiration without which this book would not have been possible, originated from what I learned from several outstanding teachers. In particular I want to mention the late Prof. dr. H. C. Brinkman, who directed my first steps in the field of theoretical plasma physics, my thesis advisor Prof. dr. N. G. Van Kampen and Prof. dr. A. N. Kaufman, whose course on Non-Equilibrium Statistical Mechanics in Berkeley I remember with delight.

### **From reader reviews:**

#### **Tracy McCulloch:**

Information is provisions for those to get better life, information these days can get by anyone with everywhere. The information can be a expertise or any news even restricted. What people must be consider whenever those information which is in the former life are hard to be find than now's taking seriously which one would work to believe or which one the actual resource are convinced. If you receive the unstable resource then you obtain it as your main information you will have huge disadvantage for you. All those possibilities will not happen in you if you take Kinetic Theory of Gases and Plasmas (Fundamental Theories of Physics) as the daily resource information.

#### **Juan Carrillo:**

The publication with title Kinetic Theory of Gases and Plasmas (Fundamental Theories of Physics) has lot of information that you can learn it. You can get a lot of help after read this book. That book exist new expertise the information that exist in this reserve represented the condition of the world currently. That is important to you to understand how the improvement of the world. This particular book will bring you with new era of the syndication. You can read the e-book on your smart phone, so you can read this anywhere you want.

#### **Billie Sneed:**

Beside this specific Kinetic Theory of Gases and Plasmas (Fundamental Theories of Physics) in your phone, it could possibly give you a way to get more close to the new knowledge or data. The information and the knowledge you might got here is fresh from oven so don't be worry if you feel like an old people live in narrow small town. It is good thing to have Kinetic Theory of Gases and Plasmas (Fundamental Theories of Physics) because this book offers to you readable information. Do you often have book but you don't get what it's facts concerning. Oh come on, that will not end up to happen if you have this within your hand. The Enjoyable arrangement here cannot be questionable, like treasuring beautiful island. Use you still want to miss the idea? Find this book as well as read it from today!

#### **Phillip Chadwick:**

Is it you actually who having spare time then spend it whole day through watching television programs or just lying down on the bed? Do you need something totally new? This Kinetic Theory of Gases and Plasmas (Fundamental Theories of Physics) can be the solution, oh how comes? The new book you know. You are so out of date, spending your extra time by reading in this completely new era is common not a nerd activity. So what these books have than the others?
